

Contents

1	André's Theory Of Spreads.	1
1.1	Affine Planes with a Transitive Translation Groups.	1
1.2	Group Partitions and André Theory.	9
1.3	Spreadsets and Partial Spreads.	17
1.4	Tutorial On Spreadsets.	30
2	The Bruck-Bose Projective Representation Of Spreads.	35
2.1	Foundational Structures In Finite Geometries: A Review. . . .	35
2.2	Projective Space Representations: Bruck-Bose Theory.	43
3	Combinatorics Of Spreads: Nets and Packings.	48
3.1	Reguli and Regular Spreads.	48
3.2	Derivation.	57
3.3	Direct Products of Affine Planes and Packings.	60
	3.3.1 A regular parallelism in $PG(3, 2)$	63
	3.3.2 Transpose.	64
3.4	Introduction to Quadrics and Unitals.	66
4	Quasifields And Their Variants.	75
4.1	Quasigroups and Loops.	75
4.2	Translation Algebras and Quasifields.	77
4.3	Schur's Lemma, Slope Maps and Kern.	81
5	Coordinatization.	86
5.1	Spreads and Quasifields.	86
5.2	Quasifields and Spreadsets.	88
5.3	Substructures of Quasifields.	94
5.4	Hall Systems	99

5.5	Coordinatizing Spreads by Spreadsets.	103
5.6	Inventory of Quasifields Coordinatizing a Fixed Spread.	104
5.6.1	Coordinatization Algorithm.	104
5.6.2	Properties Of Coordinatization.	106
5.7	Coordinatizing Rational Partial Spreads.	107
6	Central Collineations and Desarguesian Nets.	110
6.1	Central Collineations in Standard Form.	110
6.1.1	When g is a Y -elation of $\pi(Q)$	111
6.1.2	When g is a Y -axis homology of $\pi(Q)$	112
6.1.3	When g is an X -axis homology of $\pi(Q)$	113
6.2	Central Collineations In Matrix Form.	114
6.3	Rational Desarguesian Partial Spreads.	120
7	Simple T-extensions of Desarguesian Nets.	123
7.1	Spreadsets Containing Fields.	123
7.2	T -extensions of Fields.	128
7.2.1	T -Derivations.	129
7.2.2	Cyclic Semifields.	131
7.2.3	T -Cyclic $GL(2, q)$ -spreads	132
8	Semifields.	137
8.1	General Remarks On Semifields.	137
8.2	The Knuth Commutative Semifields.	138
8.3	Twisted Fields.	142
8.3.1	Polynomial for P ; Non-Commutivity of Semifield.	143
8.4	Generalised Twisted Fields.	147
8.5	Some Two-Dimensional Semifields.	150
9	Generalised André Systems and Nearfields.	152
9.1	Construction Of Generalised André Systems.	152
9.2	No Shears In λ -Systems.	155
9.3	Cyclic Groups In λ -Systems.	157
9.4	André Systems.	158
9.5	Highest Prime-Power Divisors of $a - 1$ Dividing $a^d - 1$	159
9.6	Dickson Nearfields.	165

10 Large Planar Groups.	169
10.1 Planar and Automorphism Groups.	169
10.2 Baer Collineation Theory.	171
10.3 Planar p -Groups.	174
10.4 Klein Groups On Odd-Order Spreads.	177
10.5 Tangentially Transitive Planes.	180
11 Infinite Baer Nets.	185
11.1 Point-Baer And Line Baer Subplanes.	185
11.2 Regular Direct Products.	188
11.3 Baer Nets: Structure Theory.	191
12 Hering-Ostrom Theory: Elation-Generated Groups.	196
12.1 Field Extensions and Spreads.	197
12.2 Algebra Generated By Matrix A	199
12.3 Properties of $SL(n, K)$	200
12.4 Ostrom's Theorem.	200
12.5 Generalized Elations.	209
13 Foulser's Theorem: Baer-Elation Incompatibility.	214
13.1 Baer-Elation Theory: Odd Order Case.	214
13.2 Incompatibility Theory: Even Order Translation Planes.	220
13.2.1 Maximal Elation Groups and Baer involutions.	221
13.2.2 Large Baer groups and Elations.	224
14 The Translation Planes of order q^2 that admit $SL(2, q)$.	227
14.0.3 Desarguesian Planes.	227
14.0.4 Hall Planes.	228
14.0.5 Hering and Ott-Schaeffer Planes.	228
14.0.6 The Three Walker Planes of order 25.	230
14.0.7 The Translation Planes with Spreads in $PG(3, q)$ ad- mitting $SL(2, q)$	231
14.0.8 Arbitrary Dimension.	231
14.0.9 Applications.	232
